

Exterior View from Street

This addition includes an office wing out in front to give better visibility from the street and a classroom wing as an infill between the existing church and gym buildings, tying everything together under one roof. The floor level of the existing gym was 4' above the church so we put the classroom wing at +2' and ramped between the three levels to provide handicap access to the entire building. The new foyer space and "main street" provides generous circulation, and the fireside room just off the foyer provides a comfortable café atmosphere for meetings.
