3d Model Photo Integration

Exterior Photo

Limited by a 40% impervious coverage while balancing the functional spaces of the buildings with the necessary parking, BPH designed this Phase I building in an inviting northwest craftsman style to fit with their 20 acre rural site. Siting building on a ridge to give the feeling of a lodge on a mountain side, BPH maximized the available level site area for parking and play fields. Generous south-facing foyer for gathering and north facing windows into the auditorium where the light can be easily controlled.

As part of the Conditional Use Permit process, 3D CAD modeling was combined with existing photographs to show the County and neighbors what the building will look like on the site.

Master Site Plan - Phase I
