Exterior View From Street

Interior View of Sanctuary

This project included a 21,000-square foot sanctuary, narthex, classroom addition and the renovation of the existing 27,000-square foot building. We converted the existing sanctuary into classrooms and an office suite by adding a new floor. By using an elevator and ramps, we made the total building accessible.

St. Luke's is a repeat client of BPH Architects, with other projects including a church master plan, a new parking lot, and the remodeling of their existing gymnasium.
